EXPERIENCE

Walmart Global Tech

Sunnyvale, CA

Senior Data Scientist, Machine Learning

June 2025 - Present

- Engineered personalized Walmart+ signup offer strategies using XGBoost pipelines, optimizing the acquisition funnel for sustained paid membership growth.
- Automated personalized marketing efforts by developing on the GenAI Smart Creatives pipeline. Implemented a RAG-backed, multi-LLM architecture featuring automated generation, evaluation, and refinement stages to produce high-performing, guideline-compliant copies at scale.

Data Scientist

July 2022 - June 2025

- Reduced Walmart+ cancellations by greater than 1% by targeting high lifetime value customers with save offers.
- Developed sequential recommendation engines utilizing Triple2Vec and advanced vector similarity frameworks to map complex temporal user behaviors to optimal next-best items.

Data Science Intern

November 2021 - July 2022

- Architected an unsupervised clustering pipeline using K-Means in Apache Spark to isolate high-density seasonal purchasing windows across millions of customer transactions.
- Developed a Transformer-based sequential recommendation model for next-item prediction.

EDUCATION

University of San Francisco

July 2021 - July 2022

M.S. Data Science

Courses: Advanced Machine Learning, Deep Learning, Relational Databases, Distributed Data Systems, A/B Testing

University of California, Santa Barbara

August 2017 - June 2021

B.S. Statistics

Courses: Machine Learning, Bayesian Statistics, Stochastic Processes, Natural Language Processing, Computer Vision

PROJECTS

Implicit Rating Prediction | *PyTorch, FastAI*

- Developed a Matrix Factorization model and a Tabular Neural Network model to predict implicit hotel ratings.
- Achieved 1st place on Kaggle leaderboard with a binary cross-entropy loss of 0.4032.

Social Sentiment & Emotion Analysis | *AWS, Databricks, Spark, MongoDB, BERT*

- Engineered social sentiment pipelines by scraping Reddit and Twitter, storing unstructured data across Amazon S3 and MongoDB clusters.
- Extracted deep linguistic features utilizing BERT-based emotion and sentiment NLP models via Hugging Face.
- Deployed Random Forest and Gradient-Boosted Regression models via SparkML on Databricks to accurately forecast YouTube weekly viewership using engineered sentiment indicators.

SKILLS

Languages: Python, R, C++, SQL, HTML/CSS, Unix/Linux

Frameworks & Methodologies: PyTorch, TensorFlow, Scikit-Learn, XGBoost, Transformers, LLMs/RAG, Causal Inference, LangChain

Infrastructure & Tools: Git, Docker, Apache Spark, Hadoop, Google Cloud Platform (GCP), Airflow, Amazon Web Services (AWS), Databricks,
